RESEARCH INTERESTS

I use spatial data to study our Earth, urban climate and its impacts on health, and light at night. My diverse interests are across three research communities, with keywords below.

1. Artificial Intelligence for Earth Observation: with special focus on few-shot, multitask, and open-set learning.
2. Climate and Health: with special focus on intracity temperate-related mortality/morbidity.
3. Light at Night: connection between ground and space observations; multi-angle and multi-resolution.
